

ALTA® Wireless Ultrasonic Sensors

General Description

The ALTA® Wireless Ultrasonic Sensor can be used in various applications to measure distances between the sensor and objects in its path. The sensor features autocalibration algorithms which allow it to adapt to variable environmental conditions and compensate for temperature and humidity effects.

Key Features

- ▶ Measures distance between the sensor and objects in its path.
- ▶ Resolution: 1 centimeter
- ▶ Accuracy:
 - ▶ Commercial: $\pm 5\%$ FS
 - ▶ Industrial: $\pm 1\%$ FS
- ▶ Auto-calibration algorithms allow sensor to adapt to variable environmental conditions
- ▶ Configurable thresholds for critical condition monitoring

Principles of Operation

The ALTA Wireless Ultrasonic Sensor sends a high-frequency sound pulse to measure distance based on a user-configurable time interval or Heartbeat. On every Heartbeat, the sensor produces a high-frequency sound pulse. The sensor uses the speed of sound and the time difference between sending and receiving the sound pulse to determine the distance to an object. This measurement is then sent to the gateway, making the data available in iMonnit or another approved data service.

WARNING: Tanks with liquid in them must be vented. Otherwise, condensation will accumulate on the lens and render readings inaccurate.

Example Applications

- ▶ Liquid Level Detection
- ▶ Object/Vehicle Detection
- ▶ Inventory Status (based on distance measurement)
- ▶ [Additional applications](#)

Commercial-Grade Sensors

Monnit commercial-grade sensors are designed for applications in ordinary environments (normal room temperature, humidity, and atmospheric pressure). Do not use these sensors under the following conditions, as these factors can deteriorate the product characteristics and cause failures and burnout.

- Corrosive gas or deoxidizing gas: chlorine gas, hydrogen sulfide gas, ammonia gas, sulfuric acid gas, nitric oxide gas, etc.
- Volatile or flammable gas
- Dusty conditions
- Low-pressure or high-pressure environments
- Wet or excessively humid locations
- Places with salt water, oils, chemical liquids, or organic solvents
- Where there are excessively strong vibrations
- Other places where similar hazardous conditions exist

Use these products within the specified temperature range. Higher temperatures may cause deterioration of the characteristics or the material quality.
